## CHALICE | THE LANTERN Launches Exclusively on iPad.

Atomic 42 is proud to announce that CHALICE | THE LANTERN is now available exclusively on the App Store for iPad.

CHALICE | THE LANTERN is a groundbreaking hidden-object, interactive live-action movie for the iPad. Actually, it's a game about a game, about a love, that cannot be destroyed. So there's that.

A cinematic love letter to classic adventure games, CHALICE | THE LANTERN is set in the 1920's, a supernatural romance filled with ghosts, magic and dark science. You follow Tessa, Bill, Peter and Maggie for an evening of high adventure and low wit as they raise the dead and run from the living.

As players watch each chapter of the feature-length interactive movie, they will collect dozens of objects and clues scattered throughout the videos themselves. And thanks to the QSI Engine, during special moments in the story, they will be able to switch to a character's perspective, seeing and hearing everything from their individual points of view.

James Cameron, director of Titanic and Avatar, said that CHALICE | THE LANTERN, "...pushes the boundaries of what people expect stories to be, and how they can be told."

Above all, players will fall in love with the characters, incredible performances, gorgeous cinematography and visual effects. And not one, not two, but three love stories (!!), each intertwined with spirits of the dead, occult rituals and magical creatures, both monstrous and sublime.

CHALICE | THE LANTERN is available for \$4.99 USD from the App Store on the iPad.
